

2001: An old male yew grows SE of the church. Three hollowed out branches radiate from a short bole of about 3'. Ivy winds around each of these branches and can be clearly seen in the top of the tree. Girth: 17' 5" between base and 1' (including ivy stems).

photo: Geoff Garlick 2004

2016 Paul Wood: The overgrown area around the tree was dangerous and inaccessible due to potholes, collapsed graves and broken glass.
