

2007: The female yew grows on the south side on a piece of land raised 6' above the path leading to the church. This is a fine example of a solid, columnar bole, from which more than a dozen thick branches reach upwards and outwards from a height of about 12'.

Girth:

August 2007: 15' 10" at the ground and 16' 1" at 4' - keeping the tape horizontal - Tim Hills

June 2014: 15' 11" at both 1' and 3' - Peter Norton
