

2009: The female yew grows west of the church on a precipitous mound. It has a bole of about 4' from which three main branches develop. The tallest of these has at some stage been truncated so that most of its upper branches now spread laterally.

1989: 481cm at 0.3 (15' 9") - Hatton Gardner

2009: 16' 8" at between 6" and 1' - Tim Hills

Tim Hills - 2009

Peter Norton - 2010
