

March 1984 - Reg Wheeler: Girth of 576cm (18' 11") at 30cm. A bole of 5', much covered in ivy, though attempts had been made to thin this out. There were no signs of hollowing.

April 2001 - Tim Hills: Girth was 19' 5" (592cm) between the ground and 1' and 21' 4" at 3'. The female yew grows SW of the church. Above its 5' bole the tree divides into two substantial growth areas. Branches had been removed from all parts of the tree and ivy covered much of its bole.
