

2015: The female yew dominates the entrance to the church. Its uninterrupted straight fluted bole appeared to be solid and its bark is particularly red.

Girths have been recorded as follows:

May 2013: 17' 4" at 3' - just below the bulge on the yew's north side - Peter Norton

Feb 2015: 17' 10" at 1' and 17' 5" at 2' - tree is on sloping land and was measured above the highest ground - Tim Hills
