

St Peter's church is about 750 years old. The site was first visited in 1999 and the photos taken in 2015. The female yew has a 4' bole supporting a hollow central branch with internal growth, as well as two substantial leaning branches. Smallest girth was 16' 6" in 1999.

2011: Girth of 17' at the root crown recorded by Peter Norton.

2015: 17' 1" girth between 6" and 1' 6" in order to obtain minimum.
