

The Brecon Survey recorded a 'walled' tree of 18', and others of 12', 10' and 4'.

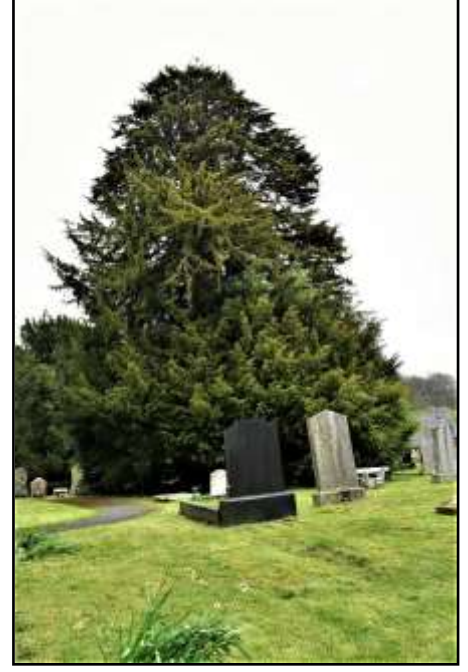

2000: The walled tree grows SE of the church, much of its bole hidden behind twiggy growth. It was possible to crawl beneath low branches and record a girth of 18' 4". Most of the growth comes from two tall branches with relatively little outward growth.

By the time these photos were taken in 2017 it was no longer possible to approach the trunk because of its numerous thick low branches. It was just possible to pick out parts of its surrounding wall.

Tim Hills

Paul Wood

A notable yew also grows here on the north side of the church at its east end. It grows on a substantial mound and divides into two thick branches at a height of 9'/10'. Girth in 2017 was 14' 6" at 3'.
