

2004: The yew grows NW of the church at the edge of a steep bank to the path below. It has split into two sides separated by 1' of humus. The larger of the two divides, giving the appearance of a tree in three parts. Two thick metal rods help keep the two sides together.

Girth:

1997: Owen Johnson in *The Sussex Tree Book* recorded a height of 12m and a diameter of 159@0m-0.8m.

2004: 16' 6" at the ground - Tim Hills

2012: Measured close to the ground at the top of the steep slope was 16' 6" - Peter Norton
