

1999: The male yew grows NE of the church. Because its bole is elongated and free of low growth it presents two massive faces. Two main upright branches rise from its solid bole at about 10'. Foliage was not particularly dense on a many branched tree.

**Girth:**

1997: 16m tall x 184cm diameter at 0.5m - Owen Johnson

*The Sussex Tree Book*

1999: 19' at 1' and 19' 8" at 3' - Tim Hills

2011: 19' 8" at 1' (root crown), 19' 10" at 2' and 20' 3" at 3'
