

2011: Peter Norton: Here is a 12th century church built on Saxon foundations. Two yews grow close to the north west of the church. The largest is female, 13' 9" at 2' 6", separated into two parts. Internal viewing shows a fine stem measuring 6" in diameter. Additional girth readings were 14' 2" at 2' and 13' 10" at 3'. The second tree (seen in the background in the first two photos) is male and girthed 12' at 1' and 11' 10" at 2'.
