

## **BERKSHIRE - churchyard sites with younger yews**

**BRIGHTWALTON** All Saints SU4270479301 1995/97 Linda Carter

Tree divides near ground level. SE near boundary. 12' 9". Female.

**CATMORE** St Margaret SU4538980163 1995/97 Linda Carter

Single stem, divides near ground level. S, near boundary. 13' 6". Female.

**HURLEY** St Mary the Virgin SU826840 2013 Peter Norton

The first church on this site is recorded in the 700's. It was rebuilt in 1086 as a partially moated Benedictine priory and then dissolved in 1536, leaving just the nave of the priory church which we see today as the parish church. Major restoration took place in 1852.

A female yew grows on a significant mound south of the church. Girth was 11' 2" at the root crown. There is also a younger twin trunked male growing against the west perimeter wall.

**LITTLEWICK GREEN** St John the Evangelist SU842803 1995/97 Linda Carter

Distant from church, rotted bole, two stems. WSW. 11' 11" female.

**SHINFIELD** St Mary SU72996821 1995/97 Linda Carter

3 major stems, connected underground. NE near boundary. 12' 10" male.

**SONNING** St Andrew SU7558575573 1995/97 Linda Carter

Very short main stem ESE near boundary. 12' 1". Female

**UPPER BASILDON** St Stephen SU60107597 20/9/2009 Tim Hills

A modern church with no fencing between church grounds and the road. A male yew grows NW of the church. Girth was 9' 10" at 1' over some burry growth, 9' 9" at 4' and 10' 7" at 5' – affected by branch removal.
